

QuickTrax™ Software Update Details

Version: 4.0

Release Date: 05/12/08

Download and Installation Instructions

Note: SmarTrax Update Cable 115-0171-484 must be used to do SmarTrax controller updates. This cable does not come standard with SmarTrax systems.

Assisted steering in Last Pass, Pivot and Fixed Curve modes when used with Envizio Plus (3.0 software) and Viper Pro (2.51A Software).

NOTE: The baud rate has been changed to 115,200 in order to facilitate these new steering modes. The baud rate will need to be manually changed back to 38,400 to work with older systems.

Envizio Pro and Cruizer will also get these capabilities with new software expected in August of 2008.

Release Notes

Quicktrax with yaw sensor capability Will calibrate in machines with or without machine-specific tune sets in software.

Line acquisition and on-line sensitivity have been adjusted to a range of 1-20 with a default setting of 10 for simplified calibration.

Assisted steering in Last Pass, Pivot, and Fixed-Curve modes when using Envizio Plus v3.0 or Viper Pro v2.51A.
