

CAN SYSTEM SOFTWARE UPDATE DETAILS

VERSION: 2020.06.23

RELEASE DATE: JUNE 23, 2020

NOTICE: VIPER PRO REQUIRES ST10 VERSION 16 OR HIGHER TO BE ABLE TO UPDATE CAN NODES. ENVIZIO PRO REQUIRES ST10 VERSION 10 OR HIGHER TO BE ABLE TO UPDATE CAN NODES.

This is a new CAN Update Package that provides procedures to update firmware for certain CAN nodes via Raven field computers. The field computers will automatically detect if the CAN node has the required hardware to be updated. If the nodes connected have unsupported hardware capabilities, the firmware will not be able to be updated through this package. The node will then need to be sent in to be evaluated or a newer style node will need to be purchased. The package includes a self-extracting file with instructions on how to update CAN nodes through various Raven field computers.

DOWNLOAD AND INSTALLATION INSTRUCTIONS

Please refer to installation instructions included in the zip file for update and installation instructions.

CAN Node download instructions for Self-Extracting Application when the file has been zipped:

1. Download (Save As) file to a location on your computer
2. Unzip/Extract Saved File to the Root Directory of USB
3. Using Mouse, left click twice on Self Extracting Application on Root Directory of USB
4. Select Root Directory of USB as location to Extract

RELEASE NOTES

Full release notes for each product update are included in the package.

1. Added missing CANUpload.exe application file
