## MANUAL UPDATE TEAMVIEWER GEOSTAR/VIPER 4

What you need:

- Internet connection (for example by use of a Wifi-dongle in case of a GeoStar)
- Create a hotspot on your smartphone with the name and password:

Hotspot name: raven

Password: ravensupport

1. If you are on the main screen, go to 'UPDATE MANAGER'.

2. The version of the 'UPDATE MANAGER' must be 4.3.7 or higher. If not, update the 'UPDATE MANAGER' by pressing on the red numbers in the third column and press the button 'Update'. Make sure the other software is up to date.

11. Accept the term of use and press next.

12. Installation is complete and TeamViewer is ready to be used. Check if TeamViewer is working before pressing ok, by log into the terminal remotely

- A. Log in with the Raven-Service password.
- B. Unable to use the Raven-Service password? Then press the gear just above the ID number in the TeamViewer screen (see left image below). Go to the 'Security' tab (see right image below) and change the password to: raven or the Raven-Service password.

13. On-screen keyboard can be closed with the cross.
