

GUIDANCE & STEERING 22.1 SOFTWARE RELEASE NOTES

PRODUCT	VERSION
RS1	22.1.0.81
SC1	22.1.0.114
HDU	22.1.0.11
MDU	22.1.0.11

NEW FEATURES, ENHANCEMENTS, AND RESOLVED DEFECTS

- New profiles and controls for Challenger 700/800 model machines in C, D & E series. The selection will contain a beta designation throughout the spring 2022 season.
- Machines pairing a CRx field computer with RS1 or SC1 can now take advantage of the machine profile copier when swapping RS1 or SC1 units out. The Machine Profile Copier service simplifies the swap by requiring calibration of the inertials only
- Added Oxbo machines provisions to read in the seat safety switch. The selection will contain a beta designation throughout the spring 2022 season.
- New profiles and controls for Equipment Technologies 850 & 1250 machines equipped with the -088 valve. The selection will contain a beta designation throughout the spring 2022 season.
- Full array of components now offered to support Goldacres G6 Series 2 machines. The selection will contain a beta designation throughout the spring 2022 season.
- Additional improvements in object pool and bug fixes

JANUARY 31, 2022 MAINTENANCE RELEASE

PRODUCT	VERSION
RS1	22.1.2.2
SC1	22.1.2.1
HDU	22.1.0.11
MDU	22.1.0.11

- For customers using a RS1 with an internal OEM7 engine under the SBAS accuracy level, Raven created a menu selection within GPS setup pages that enhances operation in challenging GNSS environments
 - Accuracy – default selection to operate exactly as previous versions
 - Reliability – GPS signal reception may improve for machines operating in harsh GPS environments
- Removed beta unlock structures that were not ready for public release
- Prepared test versions for our OEM partners
