CNH RS1 23.3.4.5 Release Notes

New Features

- DirecSteer support release
- Provides improved support on New Modem TC4NAG and TC4WWG
  - Verizon Checkbox
  - Improved Error Reporting

Enhancements

- Implement Steering Specific impacts:
  - Improvements when the Implement Steer node (TC1) mates to a PRO1200, P & CM, and CGR controlled tractor.
    - XTE
    - Heading
    - Ability to Armrest Engage
  - Improved algorithm changes to reverse steering
  - Algorithm improvements to open the range of the Position Integral Gain to correct situations where the implement tended to hang off the line. The improved algorithm allows for better online performance and improves steering to the line.
- Improved reverse detection / heading / GPS heading on start-up

Defects Resolved

- Implemented improved self-test code on modem to match up with the vendor
- RS1 System logger improvements
- RS1 Crash on shutdown resolved
- SOM Pool preferred Terminal Issue
- Core Dump size issue
- CNH50 Series Tuneset Improvements
- Fix for blank pool loading
- System Logger fix clearing GPS log
