

# *Steering Simulator Installation & Operation*

1. Install the field computer mounting bracket on top of the steering simulator.
2. Mount the field computer on the installed mounting bracket.
3. Connect the field computer cable to the back of the field computer.
4. Route the field computer cable into the simulator and connect it to the node cable.
5. Connect the power supply to the bottom of the simulator, under the node shelf.
6. Connect the power supply to the node cable.

**Note:** *The red connector on the power supply connects to the corresponding red connector on the node cable; the black connector on the power supply connects to the black node cable connector.*

7. Plug the power supply into the wall outlet.
8. Turn on the power supply.
9. Turn on the computer.
10. Set the A-B line using the field computer.
11. Engage SmarTrax using the switch on top of the steering simulator.
12. Adjust speed using the toggle switch to the right of the steering simulator.
