CR7™ and CR12™ Software Release Notes

CRX Version 23.4.1.32

Enhancements

- Updated Raven ISO node update package version 2024.1.24.
- Added support for disabling the lightbar.
- Automatically turns off the lightbar when exiting a job.
- Changed altitude precision to two decimals instead of one.
- Crop registration products are now sorted in the planted order. First planted is first sorted.

Defects Resolved

- Fixed issue where data would be lost after downgrading to a previous version.
- Fixed issue where lines could change when modifying your guidance set.
- Fixed issue where application could crash when switching crop registration products.
- Fixed issue where amount of crop registration products used was incorrect after the job.
- Fixed issue where area counter stayed at 0 when using crop registration.
- Fixed issue where application could freeze when loading a line and using crop registration.
- Fixed issue where TC communication would not be established. This was present on at least Horsch and Agrifac machines.
- Fixed issue where section control setting changes were sometimes not applied during a job.
- Fixed issue where curved lines would bend in an opposite direction after recording.
- Fixed issue where SmarTrax would crash on engagement.
